The suffix '.fwd' indicates a forward sequencing read of the insert. It does not necessarily reflect the orientation of the insert.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /clone_lib="NICHD_XGC_FaB"
/clone_Torgan: fat body; Vector: pExpress-1; Site_1: EcoRV;
Site_2: NotI; cDNA was primed using oligo-dT primer:
5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into
the EcoRV/NotI sites of pExpress-1. Size-selection 1.2kb
resulted in an average insert size of 1.8kb. This is a
primary library (normalized library is NICHD_XGC_FabN) and
was constructed by Express Genomics (Frederick, MD). Note:
this is a (http://xgc.nci.nih.gov/) Xenopus Gene
Collection library."

Bento Soares, Ph.D.

CDNA Library Arrayed by: Greg Lennon, Ph.D.

DNA Sequencing by: Washington University Genome Sequencing Center

Clone distribution: NCI-CGAP clone distribution information can be

found through the I.M.A.G.E. Consortium/LLNL at:

www-bio:llnl.gov/bbrp/image/image.html
Insert Length: 574 Std Error: 0.00

Seq primer: -40UP from Gibco

High quality sequence stop: 409.

                                                                                                                                                                                               histologically-determined to be fully malignant prostate cancer cells. Double-stranded cDNA was ligated to EcoRI adaptors, 5 cycles of PCR applied to the cDNA with an adaptor-specific primer, and the resulting PCR product subcloned into pAMP10 by the UDG-cloning method (Life Technologies). Average insert size is 600 bp. NOTE: Not directionally cloned. This library was constructed by David Krizman."

Query Match 85.6%; Score 15.4; DB 3; Length 326; Best Local Similarity 94.1%; Pred. No. 4e+03; Matches 16; Conservative 0; Mismatches 1; Indels with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli T0plUF by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."
